

NSI-SU-5095

Scanner XY Accuracy Calibration

DESCRIPTION

NSI's on-site scanner XY accuracy calibration is done using an Agilent laser interferometer system to check the accuracy of the system against a know standard.

CAPABILITIES

NSI's engineers will bring all the required equipment on-site and perform the test and document the results. We will also calibrate and adjust the NSI software scale factor and backlash correction settings for each axis

FEATURES

- Calibration of X and Y scale factor
- Calibration of X and Y backlash correction
- Report on scanner accuracy and repeatability

SPECIFICATIONS

Accuracy	< 0.001" (0.025 mm)
